                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CERTAIN ENTEROBACTERIA. IT TRIGGERS THE ACTIVATION OF COMPLEMENT CASCADE BY ACTIVATING THE C4 AND C2 COMPONENTS. IT ACTIVATES THE C4 COMPONENTS. IT ACTIVATES THE C4 COMPONENT BY CLEAVING THE ALPHA-CHAIN OF C4.

SUBUNIT: RARF CONSISTS OF A COMPLEMENT-ACTIVATING COMPONENT (CRARF) AND A POLYSACCHARIDE-BINDING (MANNOSE-BINDING) COMPONENT CRARF IS AN HETERODINER OF A HEAVY (P70) AND A LIGHT CHAIN (P29) LINKED BY A DISULFIDE BOND.

DOMAIN: CRARF HAS A MODULE ORGANIZATION SIMILAR TO C1R AND C1S.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.
SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.
SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

BIOPHYS. Res. COMMUN. 190:681-687(1993).

-I- FUNCTION: COMPONENT OF THE BACTERICIDAL FAR-REACTIVE FACTOR RARF WHICH SPECIFICALLY BINDS TO RA AND R2 POLYSACCHARIDES EXPRESSED E CERTAIN ENTEROBACTERIA. IT TRIGGERS THE ACTIVATION OF COMPLEMENT CASCADE BY ACTIVATING THE C4 AND C2 COMPONENTS. IT ACTIVATES THE C4 C4 COMPONENT BY CLEAVING THE ALPHA-CHAIN OF C4.

-i- SUBUNIT: RARF CONSISTS OF A COMPLEMENT-ACTIVATING COMPONENT (CRARF) AND A POLYSACCHARIDE-BINDING (MANNOSE-BINDING) COMPONENT. CEARF IS AN HETERODIMER OF A HEAVY (P70) AND A LIGH CHAIN (29)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P98064;

FUNCTION: C1S B CHAIN IS A SERINE PROTEASE THAT COMBINES WITH C1Q AND C1S TO FORM C1, THE FIRST COMPONENT OF THE CLASSICAL PATHWAY OF THE COMPLEMENT SYSTEM. C1R ACTIVATES C1S SO THAT IT CAN, IN TURN, ACTIVATE C2 AND C4.

"Procollagen type I C-proteinase enhancer is a naturally connective tissue glycoprotein.";

Biochem. Biophys. Res. Commun. 173:81-86(1990).

-i- FUNCTION: BINDS TO THE COOH-TERMINAL PROPERTIDE OF TYPE PROCOLLAGEN AND ENHANCES PROCOLLAGEN C-PROTEINASE ACTION: SECRETED.

-i- SUBCELLULAR LOCATION: Secreted.

-i- SUBCELLULAR LOCATION: SECRETED AT HIGHEST LEVELS IN COUTSISUES, ESPECIALLY TENDON. ALSO EXPRESSED IN CORNEA AT SIMILARITY: CONTAINS 2 CUB DOMAINS.
                                                                                                                                                                                                           EMBL; AB008534; BAAZ3217.1; -.                                                                                             tailbud and cranial neural crest. At the 20-somite stage, also expressed in the hematopoletic system.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A.

SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 5 CUB DOMAINS.
                                                                                                                                                                                                            FUNCTION: Required for patterning ventral tissues of the tail. May increase bone morphogenetic protein (BMP) activity at the end of gastrulation by proteolytic cleavage of chordin and release of BMP from inactive complexes.

TISSUE SPECIFICITY: During gastrulation, accumulates around the
